pluralsight 
hardcore developer training

Caching

The second level cache has to be manually configured to work

Batch Processing

When working with large numbers of entities, you have to think differently

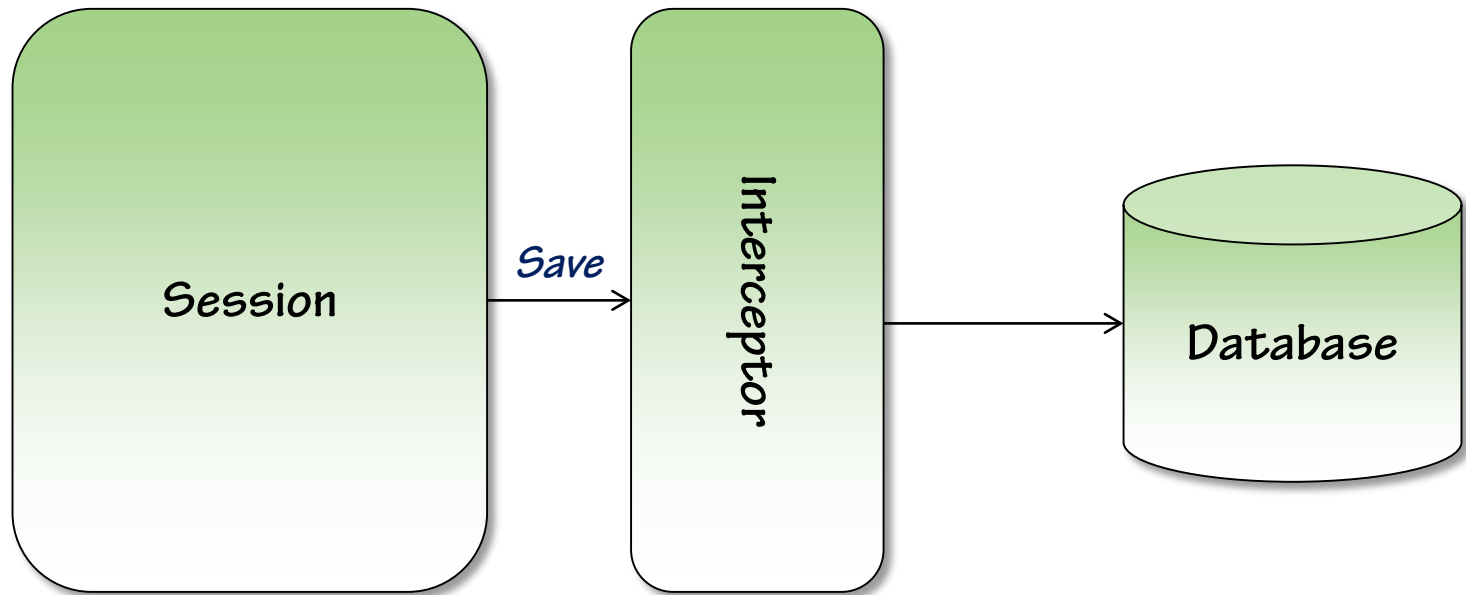

Native SQL

```
SELECT * FROM WIGWAMS  
WHERE OWNER = 'Chief'
```

Sometimes it is easiest to use raw SQL

Interceptors

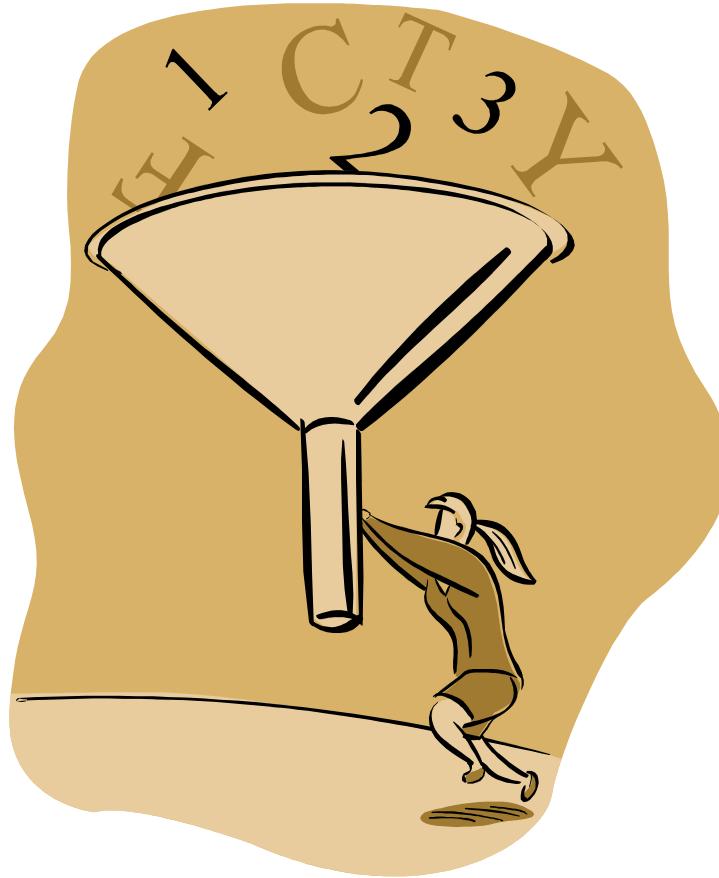

Interceptors allow you to intercept an operation and do something

Listeners

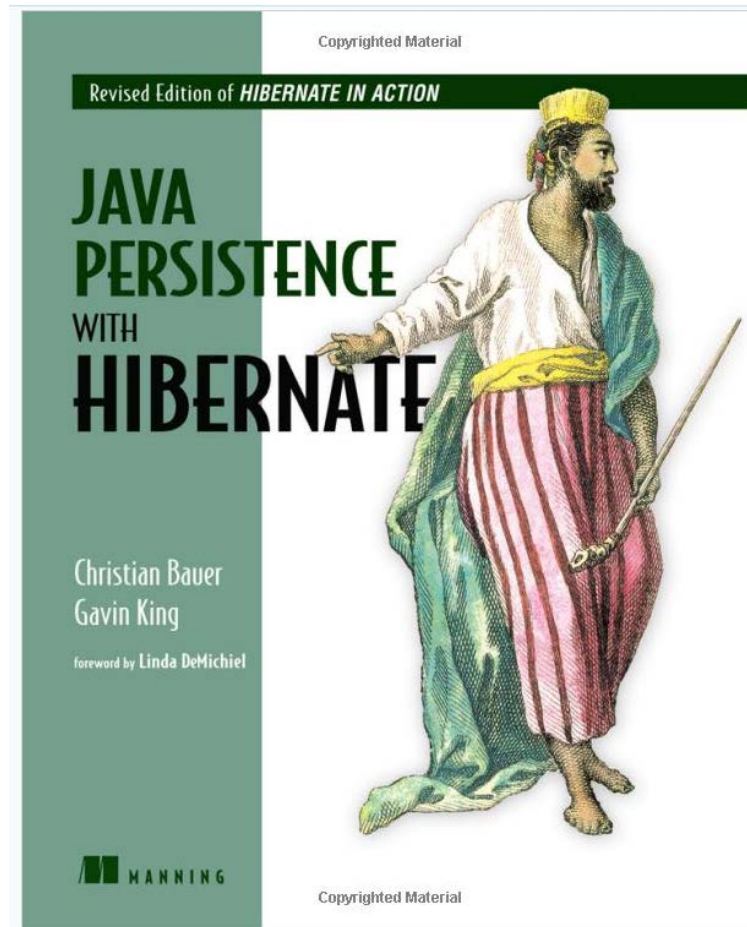

Fido was specifically trained to hear the sound of an update

Data Filters

Hibernate allows for applying filters which restrict queries at the session level

The End

Almost 1000 pages of Hibernate goodness!
