

Java Web Fundamentals

Introduction

Kevin Jones
@kevinrjones

pluralsight 
hardcore dev and IT training

Overview

- Why do you need to understand Servlets and JSPs?
- Tools used during this course
- Creating web applications
- What's in the rest of the course

Java Web Programming

- **Java web typically made up of Servlets and Java Server Pages**
 - Many frameworks, e.g. Struts build on top of these specifications
 - There are other aspects such as Filters and Listeners

Maven

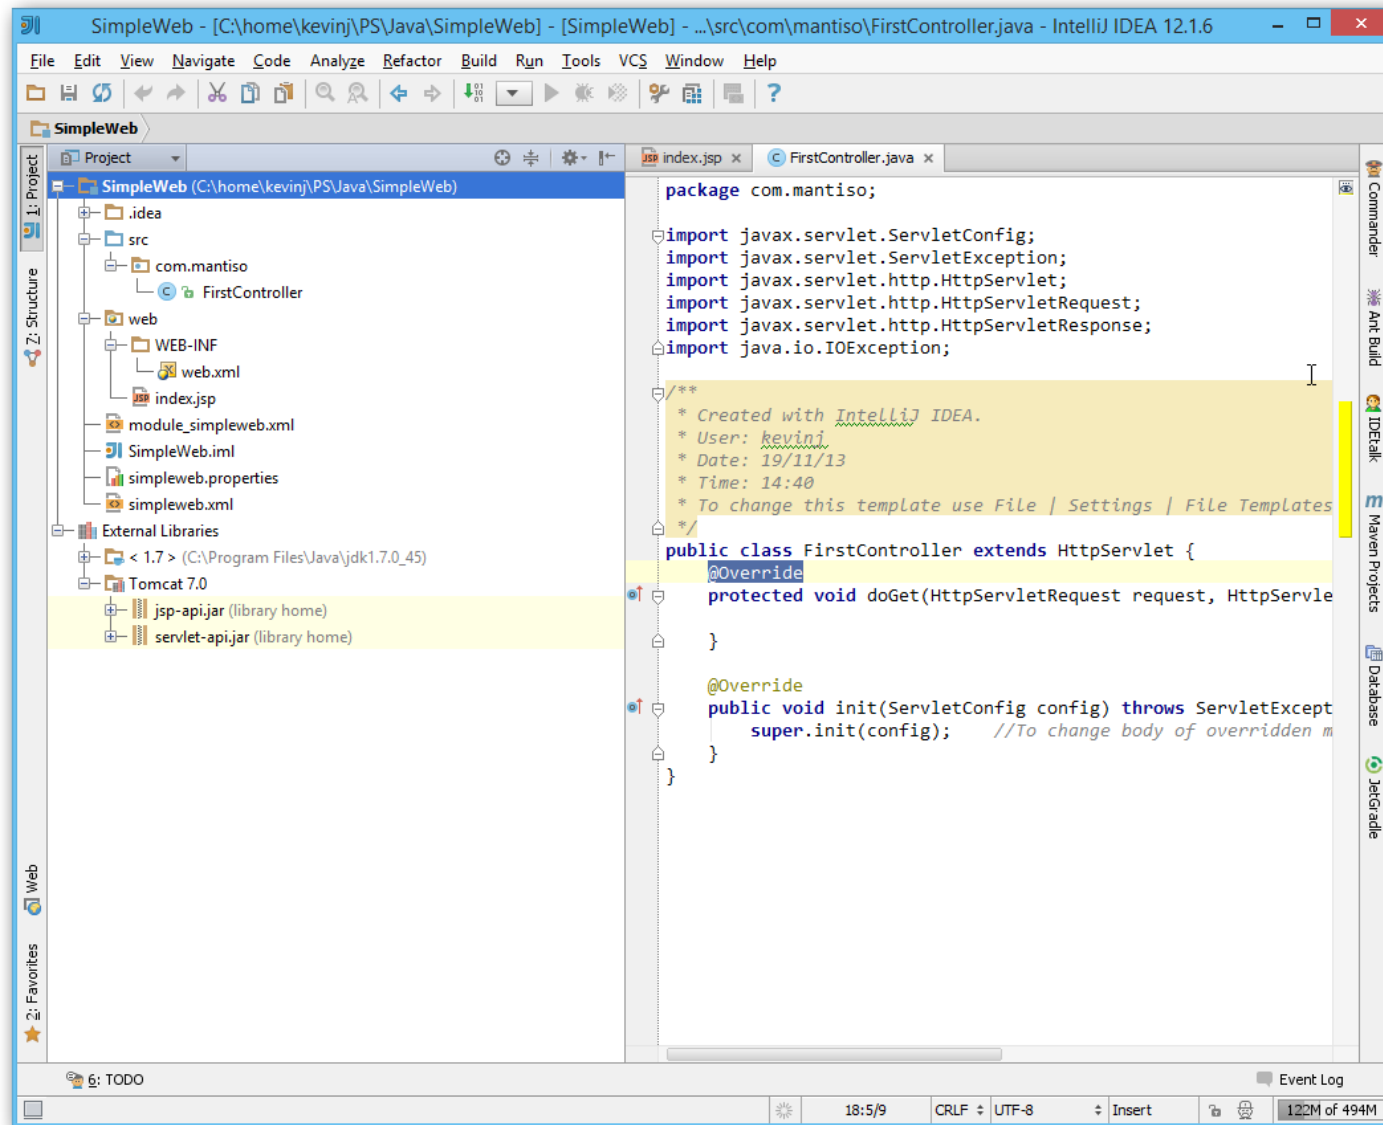

```
<project>
  <groupId>com.mantiso</groupId>
  <artifactId>mvnblog</artifactId>
  <version>1.0-SNAPSHOT</version>
  <packaging>war</packaging>
</project>
```

Deploying To A Web Server

- Unit of deployment is called a 'web application'

- ➔ □ A web application is a deployable unit of content and configuration
- ➔ □ Request routed to application using **URL base**
- ➔ □ Web applications may contain static content
- ➔ □ Web applications may contain dynamically generated content

http://someserver/myapp/endpoint

Deployment

- **Java web applications have a standard structure**
 - Applications can be deployed by simply copying files
- **Can also deploy as a .war file**
 - **Web Archive**

What's in the Rest of the Course

- Servlets
- JSP
- Expression Language
- Java Standard Tag Library
- Filters
- Listeners
- Asynchronous Programming
