

The Java Standard Tag Library

Kevin Jones
@kevinrjones

pluralsight 
hardcore dev and IT training

Objectives

- Understand why there is a Java Standard Tag Library
- Understand the basic concepts behind the JSTL
- Understand how the core tags work

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Why Tags?

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Why Tags?

- Provide encapsulation of (UI) logic

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Why Tags?

- Provide encapsulation of (UI) logic
- Replace script on a page

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Why Tags?

- Provide encapsulation of (UI) logic
- Replace script on a page
- Better for page designers than having to write Java code

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

What is a 'TagLibrary'?

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

What is a 'TagLibrary'?

- Tag libraries are collections of tags

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

What is a 'TagLibrary'?

- Tag libraries are collections of tags
- The Java Standard Tag Library (JSTL) is a set of standard tags used in JavaServer Pages

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Using Tags

- **Tags are managed as libraries**
 - Individual tags are Java classes
 - Tag metadata held in Tag Library Descriptor file
 - Collected together in a JAR file

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Using Tags

- **Tags are managed as libraries**
 - Individual tags are Java classes
 - Tag metadata held in Tag Library Descriptor file
 - Collected together in a JAR file

```
<taglib>
  <tlib-version>1.0</tlib-version>
  <jsp-version>3.0</jsp-version>
  <short-name>u</short-name>
  <uri>http://kevinj.mantiso.com/tags</uri>

  <tag>
    <name>user</name>
    <tag-class>ejsp.User</tag-class>
  </tag>
</taglib>
```

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Using Tags

- **Tag libraries are introduced with a directive**
 - Prefix is used on the page as a shorthand name
 - URI identifies the tag library
- **Container has to associate URI with tag library**

```
<%@ taglib uri="http://java.sun.com/jsp/jstl/core" prefix="c" %>  
  
<c:out value="${param['name']}" />
```

'c' is the standard
prefix for the core
library

<http://java.sun.com/jsp/jstl/core>
is the JSTL core URIs

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

The different libraries

- **Core ('c')**
 - Setting and displaying data
 - Flow control
 - Text/URL management
- **I18N ('fmt')**
 - Locale and resource management
- **XML**
 - Basic XML
 - Flow control
 - Transforms
- **SQL**
 - Database management
- **Core covered here, others are covered in the appropriate chapter**

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

General

- Many tag attribute accept expressions
- Many tags can process their bodies
 - typically body replaces a tag attribute
- Many tags can save result into a variable
- Can configure JSTL tags
 - Global configuration
 - use `<context-param>`
 - Access and set through static methods of `Context` class

```
<context-param>  
  <param-name>javax.servlet.jsp.jstl.fmt.locale<param-name>  
  <param-value>en_GB</param-value>  
</context-param>
```

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - Conditional

- Conditional

- **if**

```
<c:if test="${param['name']} == 'fred'">  
    <b>Hi <c:out value="${param['name']}" /></b>  
</c:if>
```

```
<%-- var and scope are optional --%>  
<c:if test="${param['name']} == 'fred'" var="isFred" scope='request'>  
    <b>Hi <c:out value="${param['name']}" /></b>  
</c:if>  
<br/>
```

```
<c:if test="${isFred}">  
    Hello Again  
</c:if>
```

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - Conditional

- Conditional
 - choose/when/otherwise

```
<c:choose>  
  <c:when test="${param.name == 'fred'}" >Hello Fred</c:when>  
  <c:when test="${param.name == 'alice'}" >Hello Alice</c:when>  
  <c:otherwise>You're not Alice or Fred</c:otherwise>  
</c:choose>
```

**Do Not Place Anything

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - Iteration

- **Two tags, for-each and for-tokens that support**
 - exporting an object that holds the current value
 - ranges to iterator
 - exposure of a status variable

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - Iteration

■ **forEach**

- Iterate over a collection
 - `java.util.Collection`
 - `java.util.Map`
 - `array`
 - `java.util.Iterator`
 - `java.util.Enumeration`
- comma separated `java.lang.String`

Use Iterator and Enumeration with care
Not resettable.
Must only be used by one tag at a time

```
<c:forEach[var="varName"] items="collection"  
[varStatus="varStatusName"]  
[begin="begin"] [end="end"] [step="step"]>  
  
body content  
  
</c:forEach>
```

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - Iteration examples

```
<c:forEach items="${list}" begin="1" end="10" step="2"  
    var="dte" varStatus="status">  
  <c:if test="${status.first}" >  
    Begin: ${status.begin}<br/>  
    End: ${status.end}<br/>  
    Step: ${status.step}<br/>  
    <hr/>  
  </c:if>  
  Date: ${dte}<br/>  
  Current: ${status.current}<br/>  
  Last: ${status.last}<br/>  
  First: ${status.first}<br/>  
  Count: ${status.count}<br/>  
  Index: ${status.index}<br/>  
  <hr/>  
</c:forEach>
```

status variable holds
information about
the iteration

Begin: 1
End: 10
Step: 2

Date: Thu Jan 01 06:33:20 GMT 1970
Current: Thu Jan 01 06:33:20 GMT 1970
Last: false
First: true
Count: 1
Index: 1

Date: Thu Jan 01 12:06:40 GMT 1970
Current: Thu Jan 01 12:06:40 GMT 1970
Last: false
First: false
Count: 2
Index: 3

Core Tags - Iteration

- **forTokens**

- Iterate over a token 'delimited' list

```
<c:forTokens items="stringOfTokens" delims="delimiters"  
[var="varName"  
[varStatus="varStatusName"  
[begin="begin"] [end="end"] [step="step"]>
```

body content

```
</c:forEach>
```

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - Iteration examples

```
<c:forTokens items="This;is;a;test"
              delims=";"
              var="item">
    ${item}<br/>
</c:forTokens>
```

This
is
a
test

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - Import

- Managing text is an important part of JSP

- `<c:import> == <jsp:include>++`

- Can import from

- This context
- Another context on this server
- Another server

- Imported data can be

- written to page
- stored in a string
- 'stored' in a Reader

```
<c:import url="url" [context="context"]  
    [var="varName"] [scope="{page|request|session|application}"]  
    [charEncoding="charEncoding"]>  
optional body content for <c:param> subtags  
</c:import>
```

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - Import

- Managing text is an important part of JSP

- `<c:import> == <jsp:include>++`

- Can import from

- This context
- Another context on this server
- Another server

- Imported data can be

- written to page
- stored in a string
- 'stored' in a Reader

```
<c:import url="url" [context="context"]  
    [var="varName"] [scope="{page|request|session|application}"]  
    [charEncoding="charEncoding"]>  
optional body content for <c:param> subtags  
</c:import>
```

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - Import

■ Examples

```
<c:import url="/header.jsp"/>
```

This context

```
<c:import url="footer.jsp" var='footer' />
```

To a variable

```
${footer}
```

```
<c:import context="/tomcat-docs"  
          url="/servletapi/help-doc.html" />
```

Cross context
This must be
allowed by the
container

```
<c:import url="http://kevinj.mantiso.com/index.jsp"/>
```

Another server

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - URL

- There are issues with relative URLs in a web application

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - URL

- There are issues with relative URLs in a web application
- No concept of a 'web application'

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - URL

- There are issues with relative URLs in a web application
- No concept of a 'web application'
- Using '/[url]' give server relative urls
 - /somepage.jsp
 - http://myserver.com/sompage.jsp

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - URL

- There are issues with relative URLs in a web application
- No concept of a 'web application'
- Using '/[url]' give server relative urls
 - /somepage.jsp
 - http://myserver.com/sompage.jsp
- Using '[url]' somepage.jsp
 - is relative to the page
 - From foo/index.jsp would give
 - http://myserver.com/myapp/foo/sompage.jsp

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - URL

- **<c:url ... />**
 - Allows the creation of application relative URLs
 - Also adds session encoding where necessary

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Core Tags - URL

- **Can specify**
 - 'value' of URL
 - 'params' to be added
 - Can create **application** relative urls
 - application relative URLs start with a '/'
- **Set 'context' param if importing from a foreign context**

```
<c:url value="value" [context="context"]  
[var="varName"] [scope="{page|request|session|application}"]/>
```

```
<c:url value="value" [context="context"]  
[var="varName"] [scope="{page|request|session|application}"]>  
<c:param> subtags  
</c:url>
```

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

URL - examples

Server relative

```
<a href='/ForEach.jsp'>ForEach</a><br/>
<!-- output as -->
<a href='/ForEach.jsp'>ForEach</a><br/>
```

Application relative

```
<a href='<c:url value="/ForEach.jsp"/>'>ForEach</a>
<!-- output as -->
<a href='/TestJSTL/ForEach.jsp'>ForEach</a>
```

```
<a href='
  <c:url value="/RemoteImport.jsp">
    <c:param name="url" >http://localhost:8080/index.jsp</c:param>
  </c:url>
'>Remote Import</a>
<!-- output as -->
<a href='
  /TestJSTL/RemoteImport.jsp?url=http%3A%2F%2Flocalhost%3A8080%2Findex.jsp
'>Remote Import</a>
```

**Do Not Place Anything

(Add watermark during
editing)
Note: Warning will not appear
during Slide Show view.

Summary

- JSTL Provides a core set of tags

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Summary

- JSTL Provides a core set of tags
- These allow page authors control over 'view' logic

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Summary

- JSTL Provides a core set of tags
- These allow page authors control over 'view' logic
- Allow better control over URLs

**Do Not Place Anything
in This Space**

(Add watermark during
editing)

Note: Warning will not appear
during Slide Show view.

Summary

- JSTL Provides a core set of tags
- These allow page authors control over 'view' logic
- Allow better control over URLs
- Other functionality also provided
 - SQL
 - XML
