Deploy

Send Reports

Remote Server

End-to-End Build

- Init – initialize properties

- Record – log the entire process

- Prepare – create build and report directories

- Fetch the source code

- Compile the code

- Test with JUnit

- Build a WAR file

- Deploy – FTP to the remote server

- Send Mail – zip up reports and email

Remote Directory

Summary

# Summary

`<property file="build.properties" />`

Summary

<property file="build.properties" />

<record name="${name}"
        action="start"
        append="false" />
